Dear Hiring Manager,

I am very excited to be applying for the Business Systems Analyst Co-op position at TD Bank. As a university student, I hunger for the chance to learn new skills and technologies, then to apply this knowledge in developing infrastructures and software that can truly be useful to the customers. In addition, I have been recommended to apply to this position by my brother-in-law, Trung Kevin Hoang (ID# 7057532, Log on ID: HOANGT5), who works as a Customer Assistant Specialist at TD Bank (London). He states that TD Bank, aside from being one of the biggest banks in Canada, is also a place of constant innovation and provides an excellent learning opportunity for students like myself.

Currently, I am an undergraduate student at Carleton University, majoring in Computer Science. I am a determined and hard-working person, always aiming for excellence, which earned me a spot in the university's Dean's Honour List for both of the last two semesters. I am fascinated by the ever-growing field of software development, constantly reaching out to learn new technologies and sharpen my skills with existing ones. I have spent months building each of my personal projects outside of the classroom and in my spare time. I have also enrolled in several online courses, to gain experiences in different technologies. I have faced many problems and challenges in the process of building my projects and have always aimed to come up with not only a working solution but also an efficient one.

I am proficient in the front-end languages, HTML, CSS (with extension Sass) and Javascript, being able to build websites with modern designs. For the back-end, Python and either Flask or Django, allows me to develop more complex functionalities and operations within my dynamic website. My experiences with SQL Databases and Object-Relational Mapping gives me the tools needed to store and retrieve information quickly and efficiently. I am also experienced with Object-Oriented Programming with Java and creating GUI with JavaFX.

Thank you very much for your time and consideration. Once again, I am delighted for the opportunity to contribute and learn from the people at TD Bank.

Sincerely,

Henry Vo
